

Section and SubSection with topic descriptions	GCP Documentation	ACG Videos	Youtube videos	Other
* The A Cloud Guru (ACG) video are referencing the <a href="#">Google Certified Associate Cloud Engineer 2020</a> course				
<b>1. Setting up a cloud solution environment</b>				
1.1 Setting up cloud projects and accounts. Activities include:				
Creating projects	<a href="#">Create a project</a>			
Assigning users to predefined IAM roles within a project	<a href="#">IAM QuickStart</a>			
Managing users in Cloud Identity (manually and automated)	<a href="#">Enabling APIS</a>			
Enabling APIs within projects	<a href="#">Monitoring Workspaces</a>			
Provisioning one or more Stackdriver workspaces	<a href="#">Monitoring workspaces Create</a>			
1.2 Managing billing configuration. Activities include:				
Creating one or more billing accounts	<a href="#">Manage Billing Account</a>	<a href="#">Billing Access</a>		
Linking projects to a billing account	<a href="#">enable billing for existing project</a>	<a href="#">Billing Access Control</a>		
Establishing billing budgets and alerts	<a href="#">How to: budget</a>	<a href="#">Set Up Billing Alert</a>		
Setting up billing exports to estimate daily/monthly charges	<a href="#">Export Data bigQuery</a>	<a href="#">Set Up Billing Export</a>		
1.3 Installing and configuring the command line interface (CLI), specifically the Cloud SDK (e.g., setting the default project).				
	<a href="#">SDK install</a>			
	<a href="#">SDK Config</a>			
<b>2. Planning and configuring a cloud solution</b>				
2.1 Planning and estimating GCP product use using the Pricing Calculator				
2.2 Planning and configuring compute resources. Considerations include:				
Selecting appropriate compute choices for a given workload (e.g., Compute Engine, Google Kubernetes Engine, App Engine, Cloud Run, Cloud Functions)	<a href="#">Compute Engine</a>			
	.			
	<a href="#">Cloud Run</a>			
	<a href="#">Kubernetes Engine</a>			
	<a href="#">Preemptible VM Instances</a>			
Using preemptible VMs and custom machine types as appropriate				
2.3 Planning and configuring data storage options. Considerations include:				
st	<a href="#">Databases</a>			
	<a href="#">Cloud SQL</a>			
	<a href="#">Cloud Spanner</a>			
	<a href="#">Cloud Spanner Quick Start</a>			
	<a href="#">Storage Classes</a>			
Choosing storage options (e.g., Standard, Nearline, Coldline, Archive)				
2.4 Planning and configuring network resources. Tasks include:				
Differentiating load balancing options	<a href="#">Choosing a Load balancer</a>			
Identifying resource locations in a network for availability	<a href="#">Locations</a>	<a href="#">GCP- Question</a>		
Configuring Cloud DNS	<a href="#">DNS Quick Start</a>			
<b>3. Deploying and implementing a cloud solution</b>				
3.1 Deploying and implementing Compute Engine resources. Tasks include:				
Launching a compute instance using Cloud Console and Cloud SDK (gcloud) (e.g., assign disks, availability policy, SSH keys)	<a href="#">SDK SSH</a>			
	<a href="#">SDK Instance Create</a>			
	<a href="#">Quick start creating a new instance CLI</a>			
	<a href="#">Quickstart Creating linux instance</a>			
	<a href="#">Setting instance Availability policies</a>			
	<a href="#">Creating and attaching disk</a>			
	<a href="#">Autoscaler overview</a>			
	<a href="#">Instance Templates</a>			
	<a href="#">Adding and removing ssh keys</a>			
	<a href="#">Stackdriver monitoring</a>			
	<a href="#">Compute quotas</a>			
Creating an autoscaled managed instance group using an instance template				
Generating/uploading a custom SSH key for instances				
Configuring a VM for Stackdriver monitoring and logging				
Assessing compute quotas and requesting increases				
Installing the Stackdriver Agent for monitoring and logging				
3.2 Deploying and implementing Google Kubernetes Engine resources. Tasks include:				
Deploying a Google Kubernetes Engine cluster	<a href="#">GKE Getting started</a>	<a href="#">Kubernetes Apps on Day 2</a>		
Deploying a container application to Google Kubernetes Engine using pods	<a href="#">Deploying a Sample Application</a>			
Configuring Google Kubernetes Engine application monitoring and logging	<a href="#">Google Cloud operations suite for GKE</a>			
3.3 Deploying and implementing App Engine, Cloud Run, and Cloud Functions resources. Tasks include, where applicable:				
Deploying an application, updating scaling configuration, versions, and traffic splitting	<a href="#">Deploying an application : App Engine</a>			
	<a href="#">Deploying an application: Cloud Run</a>			
	<a href="#">Cloud Run QuickStarts</a>			
	<a href="#">Deploying an application Cloud Functions</a>			
Deploying an application that receives Google Cloud events (e.g., Cloud Pub/Sub events, Cloud Storage object change notification events)	<a href="#">Cloud Run Recieve storage events</a>	<a href="#">Creating a python App with Pub Sub</a>		
3.4 Deploying and implementing data solutions. Tasks include:				
Initializing data systems with products (e.g., Cloud SQL, Cloud Datastore, BigQuery, Cloud Spanner, Cloud Pub/Sub, Cloud Bigtable, Cloud Dataproc, Cloud Dataflow)	<a href="#">Cloud Bigtable Cluster and Nodes</a>	<a href="#">Qwiklabs Cloud Labs Cloud Bigtable</a>		
	<a href="#">Using Pub Sub with Cloud Run</a>			
	<a href="#">Cloud Datastore Overview</a>			
	<a href="#">Accessing your database Cloud datastore app engine</a>			
Loading data (e.g., command line upload, API transfer, import/export, load data from Cloud Storage, streaming data to Cloud Pub/Sub)				
3.5 Deploying and implementing networking resources. Tasks include:				
Creating a VPC with subnets (e.g., custom-mode VPC, shared VPC)	<a href="#">Shared VPC</a>			
Launching a Compute Engine instance with custom network configuration (e.g., internal-only IP address, Google private access, static external and private IP address)	<a href="#">Static External IP</a>			
	<a href="#">Private Access</a>			
	<a href="#">Internal Static IP</a>			
	<a href="#">VPC multiple Interfaces</a>			
	<a href="#">VPC Firewalls Overview</a>			
Creating ingress and egress firewall rules for a VPC (e.g., IP subnets, tags, service accounts)				

	<a href="#">VPC Network</a> <a href="#">Network Tags</a>	
Creating a VPN between a Google VPC and an external network using Cloud VPN		
Creating a load balancer to distribute application network traffic to an application (e.g., Global HTTP(S) load balancer, Global SSL Proxy load balancer, Global TCP Proxy load balancer)	<a href="#">TCP Proxy Overview</a> <a href="#">SSL Proxy</a> <a href="#">Global HTTPS</a> <a href="#">Regional Networkload balancer</a> <a href="#">Layer 7 Regional Internal Load Balancer</a>	
3.6 Deploying a solution using Cloud Marketplace. Tasks include: Browsing Cloud Marketplace catalog and viewing solution details	<a href="#">Overview</a>	
Deploying a Cloud Marketplace solution	<a href="#">Deploying Security Software Agents</a> <a href="#">Deploying kubernetes apps</a> <a href="#">Deploying to Non GKE Clusters</a>	
3.7 Deploying application infrastructure using Cloud Deployment Manager. Tasks include: Developing Deployment Manager templates	<a href="#">Creating a basic template</a> <a href="#">Quickstart</a> <a href="#">Tutorial: Cloud Shell</a>	
Launching a Deployment Manager template		
<b>4. Ensuring successful operation of a cloud solution</b>		
4.1 Managing Compute Engine resources. Tasks include: Managing a single VM instance (e.g., start, stop, edit configuration, or delete an instance)	<a href="#">Starting and stopping an instance</a> <a href="#">Deleting an instance</a> <a href="#">Updating instance properties</a> <a href="#">Deleting an instance</a> <a href="#">SSH to instance</a> <a href="#">RDP to an instance</a> <a href="#">GPUs and cloud engines</a>	
SSH/RDP to the instance		
Attaching a GPU to a new instance and installing CUDA libraries		
Viewing current running VM inventory (instance IDs, details)		
Working with snapshots (e.g., create a snapshot from a VM, view snapshots, delete a snapshot)	<a href="#">Snapshot best Practices</a> <a href="#">Working with persistent disks: snapshot</a>	
Working with images (e.g., create an image from a VM or a snapshot, view images, delete an image)	<a href="#">Create an image</a> <a href="#">Custom Image</a> <a href="#">Creating MIGS</a> <a href="#">Working with managed instances</a>	
Working with instance groups (e.g., set auto scaling parameters, assign instance template, create an instance template, remove instance group)		
Working with management interfaces (e.g., Cloud Console, Cloud Shell, GCloud SDK)		
4.2 Managing Google Kubernetes Engine resources. Tasks include: Viewing current running cluster inventory (nodes, pods, services)	<a href="#">Cluster administration Overview</a> <a href="#">GKE cluster Observation</a>	
Browsing the container image repository and viewing container image details		
Working with node pools (e.g., add, edit, or remove a node pool)		
Working with pods (e.g., add, edit, or remove pods)	<a href="#">Concepts Pods</a>	
Working with services (e.g., add, edit, or remove a service)		
Working with stateful applications (e.g. persistent volumes, stateful sets)		
Working with management interfaces (e.g., Cloud Console, Cloud Shell, Cloud SDK)		
4.3 Managing App Engine and Cloud Run resources. Tasks include: Adjusting application traffic splitting parameters Setting scaling parameters for autoscaling instances		
Working with management interfaces (e.g., Cloud Console, Cloud Shell, Cloud SDK)	<a href="#">Management</a> <a href="#">Cloud Shell</a> <a href="#">Cloud API</a> <a href="#">Cloud Console</a>	
4.4 Managing storage and database solutions. Tasks include: Moving objects between Cloud Storage buckets Converting Cloud Storage buckets between storage classes Setting object life cycle management policies for Cloud Storage buckets	<a href="#">Object actions</a> <a href="#">Change object Storage Classes</a> <a href="#">Managin lifecycles</a> <a href="#">Liecycles overview</a>	
Executing queries to retrieve data from data instances (e.g., Cloud SQL, BigQuery, Cloud Spanner, Cloud Datastore, Cloud Bigtable)	<a href="#">BigQuery querying overview</a> <a href="#">CloudSql insights overview</a> <a href="#">Datastore Queries</a> <a href="#">Query Bigtable</a> <a href="#">Cloud Spanner Query syntax</a> <a href="#">Estimate Cost</a>	
Estimating costs of a BigQuery query	<a href="#">CloudSql Backup overview</a>	
Backing up and restoring data instances (e.g., Cloud SQL, Cloud Datastore)	<a href="#">Datastore Import Export</a>	
Reviewing job status in Cloud Dataproc, Cloud Dataflow, or BigQuery	<a href="#">BigQuery Manging Jobs</a> <a href="#">Dataflow Describe Jobs</a> <a href="#">Dataproc monitoring</a>	
Working with management interfaces (e.g., Cloud Console, Cloud Shell, Cloud SDK)		
4.5 Managing networking resources. Tasks include: Adding a subnet to an existing VPC Expanding a subnet to have more IP addresses Reserving static external or internal IP addresses	<a href="#">Using VPC</a> <a href="#">Adding subnet</a> <a href="#">Expangins a Subnet</a> <a href="#">Reserving Internal IPs</a> <a href="#">Reservin External IPs</a>	
Working with management interfaces (e.g., Cloud Console, Cloud Shell, Cloud SDK)		<a href="#">Operations and management</a>
4.6 Monitoring and logging. Tasks include: Creating Stackdriver alerts based on resource metrics Creating Stackdriver custom metrics	<a href="#">Operations Suite Alerting Policy</a> <a href="#">Using Custom metrics</a> <a href="#">Creating Custom metrics</a>	<a href="#">See line 153</a> <a href="#">See line 153</a>
Configuring log sinks to export logs to external systems (e.g., on-premises or BigQuery)	<a href="#">Log Exports</a> <a href="#">Logging BigQuery</a>	
Viewing and filtering logs in Stackdriver	<a href="#">Legacy Viewer</a>	<a href="#">See line 153</a>
Viewing specific log message details in Stackdriver	<a href="#">See Legacy Viewer</a>	<a href="#">See line 153</a>

Using cloud diagnostics to research an application issue (e.g., viewing Cloud Trace data, using Cloud Debug to view an application point-in-time)	<a href="#">Cloud Trace Quickstart</a> <a href="#">Cloud Debugger Setup</a> <a href="#">Using Debugger logpoints</a> <a href="#">GCP Status page</a>	See line 153
Viewing Google Cloud Platform status		
Working with management interfaces (e.g., Cloud Console, Cloud Shell, Cloud SDK)		
5. Configuring access and security		Chapter 10
5.1 Managing identity and access management (IAM). Tasks include:		
Viewing IAM role assignments	<a href="#">Viewing current Access</a>	<a href="#">IAM Breakdown: Permissions and Roles</a> <a href="#">IAM Breakdown: Members and Groups</a>
Assigning IAM roles to accounts or Google Groups	<a href="#">Granting Access</a>	
Defining custom IAM roles	<a href="#">Creating Custom Roles</a>	
5.2 Managing service accounts. Tasks include:		
Managing service accounts with limited privileges	<a href="#">Managing Service accounts</a> <a href="#">Enabling service accounts for instances</a>	<a href="#">Hands On lab: Understanding Service accounts</a>
Assigning a service account to VM instances		See Line 172
Granting access to a service account in another project		See Line 172
5.3 Viewing audit logs for project and managed services.	<a href="#">Audit logs overview</a> <a href="#">Services with audit logs</a> <a href="#">Understanding Audit Logs</a>	
NICE TO HAVES		
GCP Cloud Architecture tutorials	<a href="https://cloud.google.com/docs/tutorials">https://cloud.google.com/docs/tutorials</a>	
Intro to the Exam Guide
